ELECTRONIC LOCK FOR HOTELS

Open, Close, Live

Opera iControl

Electronic lock for hotel doors

AGB introduces **Opera iControl**: lock and accessories for hotel doors that blends design, technological features, simplicity of management and easy installation.

The advantages of **Opera iControl**

DESIGN

Possibility to choose the handle

Minimal design of the lock

Magnetic latch with silent closing

SECURITY

Twin Lock: automatic closing of the bolt

Anti-burglar security

Antipanic opening from inside the room

Mechanical emergency half cylinder for the manual door opening

Discover more

DESIGN

Feel free to choose the handle

The possibility to choose the handle gives more chances to the door design: **Opera iControl** blends perfectly with every design style.

Opera iControl requires handles fixed with through screws and grip integral with the rosette.

Minimal perspective

We opened the door to the finest design research. Every component of the system shows an innovative and minimal design.

Magnetic latch

The lock forend is minimal thanks to the magnetic latch that disappears when the door is open.

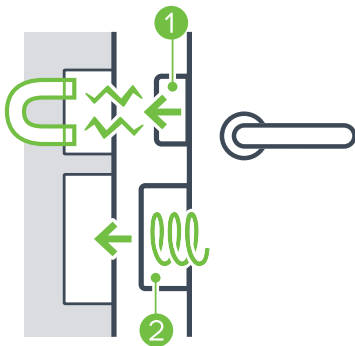

SECURITY

Twin Lock

The **TWIN LOCK** system protects the security of your room.

The **magnetic latch ①** comes out when the sash leans against the frame and the **automatic bolt ②** is activated ensuring the maximum antiburglar security.

The magnetic movement latch creates new silence standard when the door closes.

Automatic bolt as standard

The bolt is automatically released as soon as the door is closed. It guarantees the maximum security to the guest who can forget to lock the door.

Shockproof

The particular manufacturing process of the sintered steel bolt guarantees great resistance to impacts.

Antiburglar strength

The bolt protects the room from break-in attempts with deftness or tools.

Antipanic lock

From inside the room, bolt and spring latch are instantly released by simply lowering the handle for the immediate door opening.

Emergency cylinder, one more chance

Even in the electronic locks, the mechanical cylinder as a standard guarantees the manual door opening.

Opera iControl

ELECTRONIC LOCK FOR HOTELS

The perfect lock for hotels that have already installed an access control system

Compatible with any wall reader system

Security, design and silence for the door

The perfect choice for any access control system (RMS)

Opera iControl works as an electric striker, but it also ensures:

more DESIGN

Feel free to choose the handle.

Minimal forend of the lock and the striker.

The striker is the same both for right and left doors, without wing.

more SECURITY

Magnetic latch and automatic bolt for full anti-burglar security.

The sintered steel bolt protects the room from break-in attempts.

The emergency mechanical half cylinder guarantees the manual door opening.

Why choosing an electronic lock?

Mechanical hotel lock with electric striker

Opera iControl

Electronic lock for hotels

more SILENCE

No electrical sound during opening.

The door closes perfectly on gaskets improving the silence.

A light push is enough to close the door, without noise thanks to the magnetic movement of the latch.

more COMFORT

Opening an hotel door has never been that easy: there is no latch pre-load.

The door doesn't move when it is closed.

No manual bolt activation, as it is automatic.

more SECURITY

Bolt and latch are always closed automatically to protect the door from break-in attempts (thief shoulders or tools burglary).

Better resistance against fire.

There is no danger to leave the door open accidentally because of the hold-open device or the repeater.

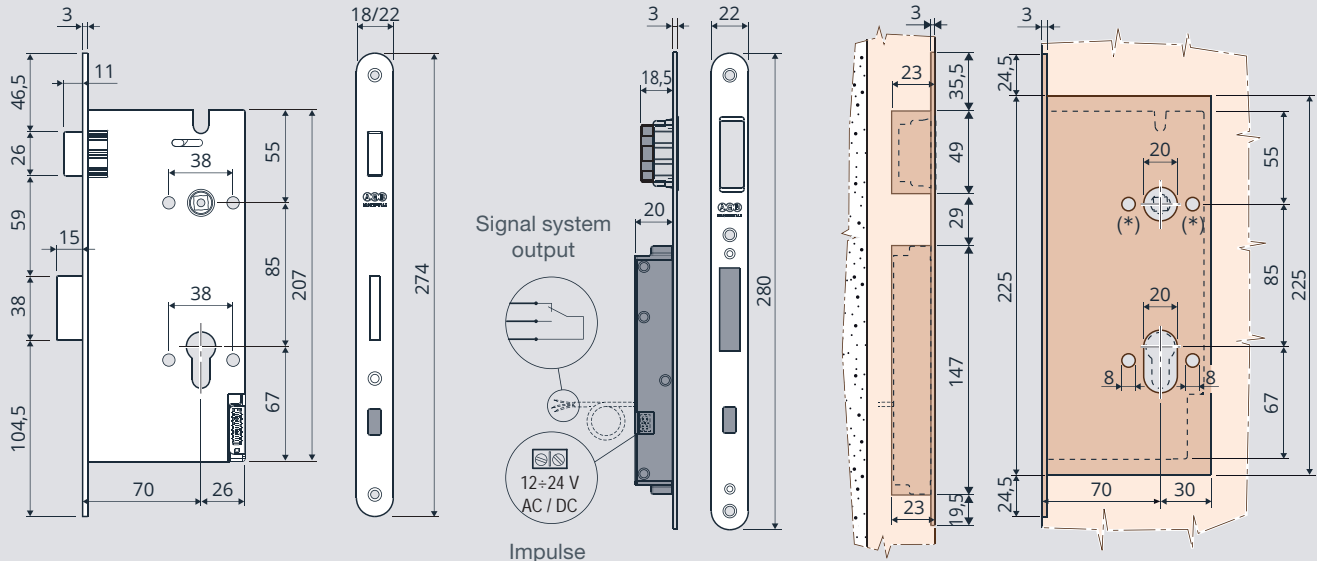

Striker with bolt sensor

The bolt sensor is available already pre-installed in kit or separately as an accessory. It allows the RMS (Room Management System) to know if the door is open or closed with the bolt.

This allows, for example, to communicate a possible break-in attempt in progress to the alarm system.

Opera iControl Lock and striker features

Opera iControl requires handles fixed with through screws and grip integral with the rosette.

(*) Hole suitable for bushing diameter or through screws of handles.
